

Brace Map

The diagram illustrates a brace map structure. It begins with a single horizontal line on the left. A large curly brace extends from this line to the right, encompassing two vertical columns of horizontal lines. The top column contains five lines, and the bottom column contains three lines. A second curly brace is positioned to the right of the top column, grouping its five lines. A third curly brace is positioned to the right of the top three lines of this second group, grouping them. Finally, a fourth curly brace is positioned to the right of the two lines at the bottom of the third group, grouping them. This structure represents a nested hierarchy of elements.
